

Map Explorer Software

Advantages of Map Explorer:

- Ability to search and view streets and important locations.
- In the smart map system, search can be filtered by municipal districts and is available for citizens.
- By entering the name of an alley, main street, or district, suggestions are automatically provided.
- Government centers such as governor's offices, medical and educational centers including hospitals and clinics, parks, tourist attractions, and police and traffic centers can be located.
- The system displays the requested street location on the map with a flag marker. The operator can mark the exact location on the map based on the information received from the citizen.

- For each registered complaint, a flag is displayed on the map, allowing visualization of problem concentration areas and helping allocate limited budget resources toward the most critical locations.
